Dear colleague,

Thank you so much for your work on the implementation of the calculation and number processing EC301R battery on computer.

Please find here enclosed my best copies of the 4 pictures (the originals have been lost...), norms for most of the tests, and the battery.

Basically, the battery is made of:

- x instructions for the examiner: they should appear on the screen.

- x scoring forms for the examiner: they should also be printed on the screen, and the examiner should indicate the score for each item in the test.

- x information to be presented to the patient (for instance a pattern of dots to be enumerated). It should appear on the screen, without any other information, and only one item at a time.

- x a sheet of paper for the patient where he/she has to write down a response. The response should then be typed on the keyboard by the examiner (tasks I,
